SAASINT

SaaSint Vendor Risk: pilot programme

Joint Standard 2 third-party oversight, out of the spreadsheet.

WHO IT'S FOR

Mid-sized South African financial institutions covered by FSCA/PA Joint Standard 2 of 2024: retirement funds and section 13B administrators, asset managers and CIS managers (discretionary FSPs), and smaller insurers.

THE PROBLEM

Joint Standard 2 has required institutions to oversee the cybersecurity of their third-party service providers since 1 June 2025. Most teams still do it in spreadsheets and email: questionnaires sent as attachments, evidence scattered across inboxes, expiry dates nobody tracks, and no clean record to show an auditor.

WHAT THE PILOT GIVES YOU

- Three places only, for 60 to 90 days, free.
- The founder loads your vendor list and sends your first JS2 starting-point questionnaires with you.
- Vendors answer through a secure link, with no account, and attach their evidence. Documents carry expiry reminders, answers become explainable risk scores, and every action lands in an audit log that can't be edited.
- A full export of your data at any time: vendors, answers, scores, evidence files and the audit log.
- Your data is stored in the EU (Ireland).

WHAT WE ASK IN RETURN

- Honest feedback, including a short call every two weeks.
- A reference only if it works for you. Nothing about you is published without your written agreement.

WHERE SAASINT STANDS

- Founder-led and pre-customer: pilot organisations will be among the first to use it.
- Built with SOC 2-aligned practices (tenant isolation enforced in the database, an append-only audit log, private evidence storage), but not SOC 2 or ISO 27001 certified.
- The JS2 questionnaire is a starting point to edit to your risk appetite. It isn't legal advice or a compliance guarantee.

Request a place

Request a free trial at saasint.dev/request-trial and mention the pilot. We review every request personally and reply within 2 working days.
